At Saudi Development Contracting Est, we are dedicated to delivering safe & effective industrial solutions tailored to our clients' needs.

Our commitment to excellence, professionalism, and customer satisfaction has made us a trusted partner in the region. We specialize in a wide range of services, including civil construction, electrical and instrumentation services, and human resource solutions, all designed to meet the highest industry standards. Our team of skilled professionals ensures that each proj ect is executed with precision, utilizing advanced technologies and innovative approaches. By partnering with us, you can expect exceptional results, reliability, and a strong focus on your unique project requirements.

MISSION & VISION MISSION & VISION MISSION & VISION

Our vision at Saudi Development Contracting Est is to be the premier construction and contracting company in Saudi Arabia, recognized for our exceptional quality, innovation, and client satisfaction. We strive to be the preferred choice for our clients, providing them with reliable, efficient, and sustainable solutions that contribute to the development and growth of the nation.

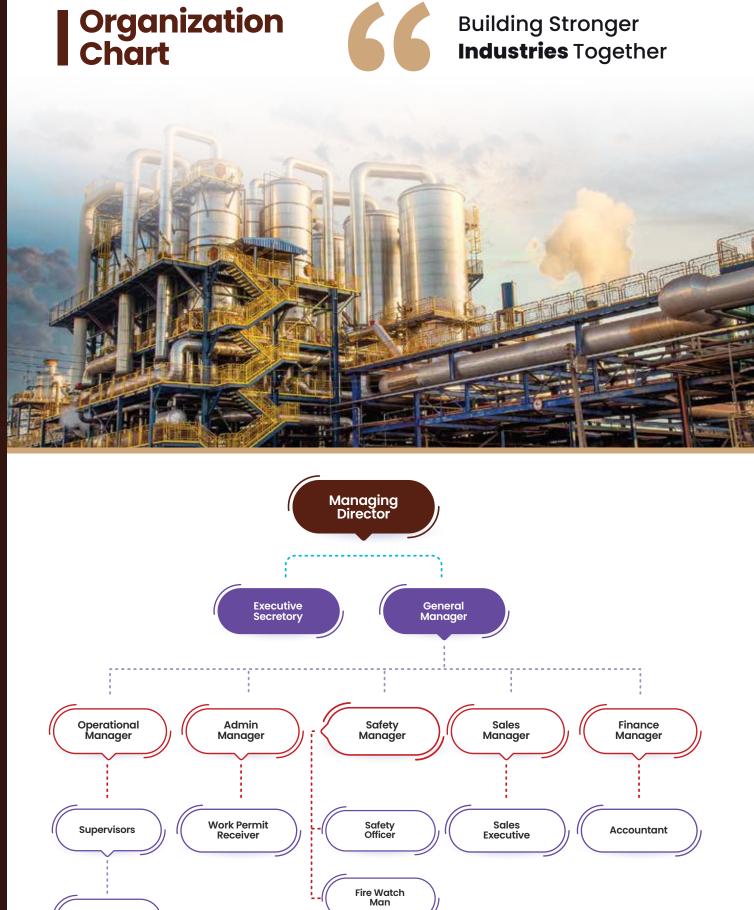

'
 Mission

Our mission at Saudi Development Contracting Est is to deliver excellence in construction and contracting services by utilizing our expertise, advanced technologies, and a customer-centric approach. We are committed to providing high-quality solutions in civil construction, electrical & instrumentation, & maintenance services. Through our dedicated team of professionals, we aim to exceed client expectations.

At S D Contracting Company, we specialize in comprehensive cathodic protection (CP) systems designed to protect underground & submerged metallic structures from corrosion.

Our services include vertical drilling up to 13 meters, with a diameter of up to 10 inches, to ensure precise placement of anodes. We expertly install both horizontal and vertical anodes, backfill the area with sweet sand for optimal conductivity, and install PVC sleeves for accurate testing and monitoring. Our CP systems are engineered to extend the life of infrastructure, providing robust protection against corrosion in challenging environments.

Excavation of Cable Trenches & Backfilling Works

Our team excels in the excavation of cable trenches, catering to both paved and unpaved areas.

We start by performing asphalt or concrete cutting and surface breakout, followed by careful disposal of debris. The trench excavation process is meticulously executed to ensure the correct depth and alignment. After cable installation, we handle backfilling with high-quality materials, followed by thorough compaction to prevent settlement. Finally, we reinstate the surface with asphalt or concrete, ensuring a seamless finish that matches the surrounding area, thereby minimizing disruption. 05

We offer a complete suite of cable laying & termination services, crucial for electrical & communication infrastructure projects.

Our process begins with precise cable laying, where cables are securely positioned and surrounded by sweet sand to provide protection from mechanical damage. We then place protective tiles and warning tape above the cables as an additional safety measure. The final step involves expert termination of the cables, ensuring reliable connections that meet industry standards. Our attention to detail and adherence to safety protocols guarantee a high-quality installation that performs efficiently over time.

Construction & Installation of Civil Foundations (Precast)

Our foundation construction services are comprehensive, covering the entire process from start to finish.

We begin with precise excavation and leveling to prepare the site, followed by rebar bending and installation to reinforce the structure. Our team then prepares formworks for the foundations, ensuring they meet the required specifications for strength and durability. We also install thermal control systems to manage the temperature of mass concrete, preventing cracking and ensuring structural integrity. The concrete pouring, curing, and surface preparation are meticulously handled, and we finish with protective coating works to enhance durability. Finally, the foundations are installed, backfilled, and compacted to ensure stability and longevity. 06

Construction of Duct Bank (Precast)

Our expertise in constructing precast duct banks ensures that electrical & communication conduits are securely housed and protected.

The process begins with precise excavation and leveling to establish a solid base. We then install rebar and prepare formworks to create a strong structural framework. After pouring and curing the concrete, we prepare and coat the surface to prevent environmental damage. The duct bank is then installed, followed by backfilling and compaction to secure it in place. This method ensures that the duct bank is robust, well-protected, and capable of withstanding external forces.

Asphalting Works for Reinstating Trenches

Our asphalting services are critical for restoring surfaces after trenching activities.

We start by compacting & preparing the trench area to create a stable base. The asphalt is then reinstated in two layers: the base layer provides structural support, while the top layer offers a smooth, durable finish. We ensure that the asphalt is applied evenly and compacted properly to prevent future settlement or cracking. We complete the process with precise road marking, ensuring that the restored area is safe, functional, & blends seamlessly with the existing road or pavement.

66

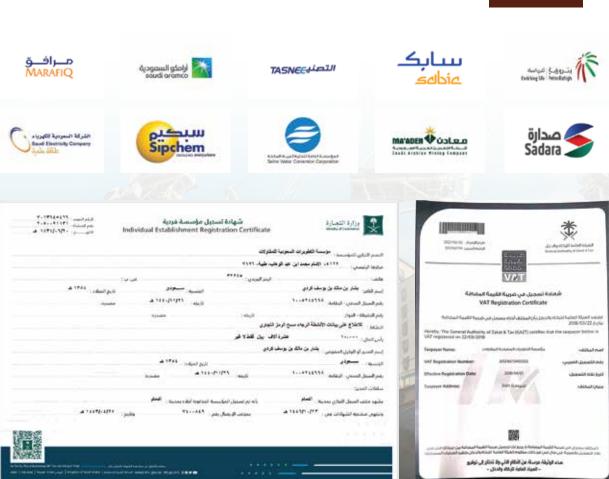

Civil Construction & Earth Moving Works

We provide a full range of civil construction and earth-moving services, starting with topographic surveys to assess the site and plan the project accurately.

Our team handles area preparation, including clearing and grading, to create a suitable working surface. We execute cutting and filling operations to achieve the required elevations, followed by grading and leveling to ensure a smooth and stable surface. Stripping of the area is performed to prepare for excavation, and we complete the process with final leveling and compaction. These steps ensure that the site is perfectly prepared for construction, minimizing delays and ensuring a solid foundation for further work.
